INVESTIGATION REPORT

Fasting Blood Sugar 118 H mg/dL (Normal: 70-99)
HbA1c 6.1 H % (Normal: <5.7)
BMI 27.8 H kg/m2 (Normal: 18.5-22.9, Asian cutoff)

Note: 'H' denotes result above normal reference range.

EXPECTED BEHAVIOR: Flag ("H") is embedded in the value string itself, not a separate table column like your other mocks. Tests whether the extractor correctly parses "118 H mg/dL" into value=118, flag=HIGH, unit=mg/dL rather than misreading "H" as part of the number or missing the flag entirely.
