This is a computer-generated mock report created for software testing purposes only. Not derived from any real patient data.

EXPECTED BEHAVIOR: Zero diabetes or obesity-relevant fields present. Step 2 hard-stop gate should trigger: block generation, return the explicit "could not extract relevant values" error. Should NOT produce any risk score. Bonus: report DOES contain real HIGH flags (liver enzymes) – tests that the system doesn't get confused into fabricating a metabolic score just because some abnormal flags exist somewhere in the document.
