

Apex Wellness Diagnostics

Patient: Naveen Kumar

Age/Sex: 31/M

ID: AW-5521

Report Date: 09-Aug-2026

Report Type: Executive Health Checkup

ANTHROPOMETRY & VITALS ONLY

Height: 175 cm

Weight: 89 kg

Body Mass Index (BMI): 29.1 kg/m²

Waist Circumference: 98 cm

Resting Heart Rate: 76 bpm

Blood Pressure: 128/82 mmHg

Note: Blood biochemistry panel pending – patient to return for fasting sample collection next visit.

EXPECTED BEHAVIOR: BMI, height, weight, and waist circumference are present and should extract normally. Glucose, HbA1c, and random glucose are genuinely absent (explicitly noted as pending, not just missing). Tests whether the system correctly produces an OBESITY-only classification (BMI 29.1 = obese under Asian cutoff, waist >90cm = central obesity flag) while explicitly stating diabetes risk cannot be assessed from this report – rather than either (a) blocking everything via the hard-stop gate, which would be wrong since obesity data IS present, or (b) fabricating a fake glucose value to fill the gap.
