

Metro Diagnostics Lab

Patient: Priya Desai

Age/Sex: 43/F

ID: MD-30987

Report Date: 25-Sep-2026

BIOCHEMISTRY - GLUCOSE PROFILE

Test	Result	Unit	Reference Range	Flag
Fasting Blood Glucose	97	mg/dL	70 - 99	
HbA1c	6.8	%	< 5.7	HIGH

ANTHROPOMETRY

Height: 155 cm Weight: 58 kg BMI: 24.1 kg/m2

EXPECTED BEHAVIOR: Deliberately conflicting result – FBG 97 is Normal range, but HbA1c 6.8% is Diagnostic range for diabetes (this happens in real patients, e.g. recent dietary changes affecting a single fasting reading while HbA1c reflects a 3-month average). Tests whether Step 3 correctly reports BOTH classifications separately and flags the disagreement, rather than averaging them into one misleading "moderate risk" score or silently picking the more favorable (FBG-based) result. BMI 24.1 is Normal under WHO standard but "Overweight" under the Asian-adjusted cutoff (23-24.9) – also tests whether your output states which BMI standard it's using, since the classification differs by standard for this exact value.
